UMAIR MANZOOR

Software Engineer

umairmanzoor546@gmail.com +923048849668 Lahore, Pakistan github.com/Umair-Manzoor-47

linkedin.com/in/umair-manzoor

Software Engineer with 2+ years building production systems in C#, C++, and Dart, spanning real-time architecture, performance optimization, and cross-platform delivery. Strong object-oriented design fundamentals, version control workflows, and a track record shipping software used by 100K+ users. Comfortable ramping up quickly on new frameworks and stacks.

PROFESSIONAL EXPERIENCE

Associate Software Engineer 01/2026 – Present
ZnK, GenIteam Lahore, Pakistan
- Shipped production features across two live titles (50M+ combined downloads) in a large-scale C# codebase.
- Optimized performance-critical systems for resource-constrained hardware (low-to-mid range Android devices).
- Prototyped and validated new systems, accelerating concept-to-production timelines.

Jr Software Engineer (remote) 01/2025 – 12/2025
EnsembleUI New York, USA
- Contributed to the Ensemble low-code framework, implementing UI features used by external Flutter developers.
- Improved widget rendering performance by 2% via draw call reduction, render caching, and async backend-to-widget loading.
- Built reusable app templates (restaurant, rental) shipped as platform reference implementations.

Software Engineer Intern 09/2024 – 12/2024
UET Game Studio Lahore, Pakistan
- Engineered VR interaction systems for a medical education app under mobile hardware constraints.
- Optimized rendering pipeline for low-end mobile VR, balancing fidelity with strict performance budgets.
- Shipped 2 titles to Google Play and Amazon Store with 10K+ combined downloads.

PROJECTS

Otterus 05/2026 – Present
Custom Game Engine (*C++*, *OpenGL*)
- Building a systems-level application from scratch in C++ with OpenGL, including runtime debugging and editor tooling.
- Focus areas: memory management, rendering architecture, and software design patterns.

ORA Architecture 08/2025 – 10/2025
Construction Business Automation (*Java Springboot*)
- Developed backend service for marketplace platform connecting architects and contractors to clients. Automating project/work pipeline coordination.
- Built REST APIs, database scheme and authentication in java, and contributed to java frontend.

Red Baron(Dogfight) 10/2025 – 12/2025
Multiplayer Air Combat (*C#*, *Unity*, *Photon*)
- Built a client-server networked application with real-time state synchronization across clients.
- Implemented server-authoritative logic with dynamic scaling based on session state.

ShareKaro 10/2024 – 12/2024
Expense Splitting Mobile App
- Built a cross-platform expense-splitting application with expense management, group sharing, and notification modules.
- Implemented real-time syncing across devices to streamline collaborative group expense tracking.

Metaverse ExpoCenter 05/2023 – 06/2024
- Built a virtual events platform featuring avatars, digital asset integration, and multiplayer real-time communication systems.
- Tested with 50+ concurrent users, ensuring stable synchronization and seamless interaction.

SKILLS

Languages: C#, C++, Dart, Java

Core: OOP Design, Real-time Systems, Performance Optimization, Event-Driven Architecture, Version Control (Git)

EDUCATION

BS Computer Science 10/2020 – 10/2024
University of Engineering & Technology, Lahore Lahore, Pakistan

FSc Pre-Engineering 04/2018 – 09/2020
Rashid Minhaas Boys H/S school Alipur, Pakistan
